EDITOR'S DESK

Jai Srimannarayana !

Every modern scientific approach has to explicitly depend on the Nature. The Nature's way never changes. It is only we human beings, endowed with little knowledge, try to overcome the Nature with our artificiality. The Nature has provided everything for the needs of all the living species on this Earth. When we exploit the Nature beyond its tolerance limits, definitely it reacts in its own way.

It is well known that no human is controlling this Universe. Humans are struggling a lot, yet to understand the basic rules of the Nature. There's a long way ahead to find out the secrets of this Universe? Any advanced technology only strengthens the fact, how perfect this Nature abides by its rules ! If at all the Nature violates any rule, then, the technology and its dependencies, becomes absolutely useless and void. Human beings are privileged to understand the behaviour of the Nature ! Living in tune with the Nature, maintaining harmony with the environmental forces, reflects real progress in technology. Doing things against Nature, though appears temporarily beneficial, ultimately disturbs the equilibrium and creates environmental imbalance at some point of later time.

Tsunami stands witness of such a disturbance. It is a clear indication that we need to be more eco-friendly while undertaking all our major projects. When someone hurts her at some part of her body, she adjusts herself to heal the wound. Over exploitation of Earth and her resources is the major issue common before all the countries. Tsunamis or Earthquakes or lava outbursts or such unfavourable natural effects would certainly result in proportion to the overexploitation or misuse of the Nature.

Curing wound is different from taking precautions to never get injured ! However there is a need to educate people, to care for the Nature. After such disasters occur, it is a human concern to help those victims to the extent everyone is capable of. Some organisations have denied help to the victims because of their conditional support based on religious conversion.

HH Sri Swamiji's 'soothing hand', has large open domain in serving the sufferers. HH Sri Swamiji rushed to the affected spot, endowed them with moral and spiritual strength and supplied boats, reconditioned hundreds of engines, distributed hundreds of fishing nets along with utensils, new clothes and also food materials to the victims irrespective of caste, creed or religion to which they belong. HH Sri Swamiji took up a project to construct all 350 houses of a village "Poompuhar" that was severely affected by Tsunami. It is the time for us to practically and physically support these victims who have lost their blood relations and their homes, apart from losing their daily bread, earning means such as boats, nets etc. It is our responsibility to fulfill any of those needs, to bring the victims back to normal life. **JET has taken up the mission to serve the sufferers. Every bit of HH Sri Swamiji's endeavour is certain to light up the Divine light, in millions of lives... Let us be a part of His divine mission.**

Bhishma E:kadasi gave us another opportunity to chant Sri Vishnu Sahasranama Sthothra with thousands of Bhagavad Bandhus, at Guntur, on 19th Feb. Chanting it any time, fuses our hearts with Divinity and unlocks our ' Self ' to realise the Supreme!

Writing O:m Namo: Ve:nkate:sa:ya 1100 thousand millions of times is the assignment blessed on us whereas, spreading the fragrance of Sri Ramayanam of Valmiki, chanting it, touring throughout the country, performing havan at every place, is taken up by HH Sri Swamiji.

Let us make this silver jubilee year of HH Sri Swamiji, a great spiritual landmark, in the history of the world..

Jai srimannarayana !
